MEN WHO SMELT BISBEE'S ORES A. BAUER

An Interesting Roster--Climatic Conditions at Douglas as Told of in Annual Holiday Number of International American

The recent annual heliday number of the International American of Douglas contained the following interesting roster of smelter people and an able dissertation on climatic conditions at Douglas, which follows the first article:

经被抵抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗抗

Below will be found complete rosters of the men who direct the great F. Staebler, converter foremen. smelting enterprises in Douglas. The list includes the general managers, superintendents, heads of departments, office forces, etc.:

COPPER QUEEN. Walter Douglas, general manager. S. W. French, assistant general manager

G. B. Lee, superintendent. Forest Rutherford, assistant super intendent

General Office Clerks:

J. H. Davis, chief clerk.

G. H. Dowell, metallurgical clerk. H. J. Bishop, assistant metallurgical clerk

A. J. McDermott, general foreman. L. S. Palmer, night timekeeper.

P. T. Nichols, stenographer. P. J. Benson, carpenter foreman. E. S. Morris, foreman blacksmith stion

Elmer Campbell, boilermaker fore-

man.

John Hill, T. J. Wright, Fred Sandstrom, furnace foremen.

George Sutty, Henry Reinhart, Joseph Lefevre, general yardman.

By J. J. P. ARMSTRONG.

Among the first things asked by stranger coming into town is, What sort of climate have you? As far as we are concerned in Douglas, we can safely say without hesitation, that our climate compares favorably with any town in the southwest. All one has to do is to walk over to our public schools during recess hour and see the vigorous and healthy chil dren at play, and besides to think that over 25 per cent of the parents of those children have moved here owing to their own ill health is sufficient proof that our climate must be one of a most invigorating character.

While to be sure, we have no sew erage system, yet nature takes care of that by sending us an abundant rainfall every few months, and as the townsite people so built the town that when it rains the fall of the streets is enough for the water to carry off all debris and leave us with a cleaner condition than any street cleaner could do. To the tuberculosis patient this climate is all we claim for it. It has been well said that tuberculosis is a disease of civilization, and that the nearer one approaches to the primitive states the less frequently does, it appear, and again, that pure air, equability of temperature, and maximum amount of sunshine are the trinity which make up the ideal 'breathing spot" for the tuberculous With these premises, I think that for ther consideration will tend to devel op that which may be found in every part of the country, and localize those particular regions which are especially favored from a climatic standpoint

A leading work of the day discuss ing this subject states that, given the thre requisites just mentioned, it does not matter where the location is, pavided the patient lives an outdoor life. Seemingly it does not occur to the author that only particularly greatly favored localities possess these ecessary adjuncts to successful clinate treatment, thus making practical the carrying out of its proviso,

In order to obtain pure au maximum amount of sunshine and equability of temperature, at one and the same time in a given locality, it is necessary to seek a climate which is noted for its dryness and which has at least a moderate at une, for it is in such regions that we see almost perpetual sunshine which, with the altitude, insures purity of the atmosphere, provided we bear in mind our primary axiom-the keeping close to primitive conditions-which is nothing less than avoiding overcrowding. both in the locality chosen and the residence selected.

In regard to dryness, I think it is very generally conceded that it plays the role of something more than a mere useful adjunct, as some authorities put it, for clinincal testimony is overwnelming in the remarkable re sults obtained over the tubercular process in the arid regions. You will, therefore, see that we now have in this ideal climate a locality which can boast of pure air, abundance of sunshine, the right altitude, freedom from undue moisture and sudden and severe changes of temperature.

In Arizona, and especially this southeastern part of it, we have a noderate altitude of 3955 feet, a valey fair to behold, surrounded and sheltered by mountains and foothills: a country of very little rain, averaging about ten inches, and frequently less, which, accommodating itself to our winter visitors, generally always falls in the summer. A land of perpetual sunshine-325 days in the year-with a winter that is unrivalled in possessing the necessary qualifications of climatic therapy.

Our country has been aptly called the land of sunshine and sand, which warrants the assertion to supremacy in the matter of cloudless skies and absence of humidity; it is true that In consequence we have dust at times, but now that our streets are being watered regularly we have had very few of the "twisters" which were our weekly visitors up to the last year. Therefore what more do we want or what more can we wish for? The answer is obvious

Work on the extension of the Douglas street railway will begin with the Chas M. Moore, boiler house fore new year. An up-to-date electric system will be in operation, covering every section of the city, before May

The Copper Handbook

A practical book of nearly a thousand pages, useful to all and necessary to most men interested in any manner in Copper Production or Copper Invest-

Its facts will pass meuter with the trained scientist, and its language is easily understood by the every-day man.

It is a dozen books in one, covering the History, Uses, Terminology, Geo graphy, Geology, Chemistry, Mineralogy, Metallurgy, Finances and Statistics of Copper.

It gives the plain facts in plain English, without fear or favor. Hundreds of Swindling Companies are exposed in the plainest possible language, and the dubious propositions are handled without gloves.

It lists and describes 3,849 copper mines and companies, in all parts of the world, descriptions running from two lines to twelve pages, according to im-

The Copper Handbook is conceded by all authorities to be the

World's Standard Reference Book on Copper.

The Miner and Smelter need the book for the facts it gives them about prospecting, mining and smelting.

The Investor needs the book for the facts it gives him about mining investments and copper statistics. It may give him its cost many hundredfold by its exposure of shady concerns, and its criticisims of doubtful ones.

Price is \$5 in buckram, with gilt top, and \$7,50 in full library morocco. The Copper Handbook will be sent, fully prepaid, to any address ordered, in any part of the world, without any payment in advance, to be paid for if satisfactory, or may be returned within a week of its receipt if found unsatisfactory, for any reason whatsoever.
